

Scenario 1 - Incremental Spend: On vs. Off Yonder

The problem

Our single most important commercial metric is incremental spend - how much more a partner's customers spend when that partner is active on Yonder vs. when they're off. Right now this is entirely manual in Amplitude. There is also no structured way to record when a brand is live; someone has to manually flag it to any tool we're using.

Your task

Build a reporting layer that (a) captures partner on/off status over time as a structured, queryable input, and (b) calculates incremental spend deltas from transaction data when a partner is active vs. inactive. Output should be clean enough to share directly with a partner. We'd like to see unique (new) transactions, as well as existing transactions.

Brand : FRIVE

Commercials: £12.50 CPA repeat, £20 CPA new (baseline should be start date)

Months on in 2025 : January 25, March 25, May 25, July 25, Oct 25, Dec 25

Scenario 2 - Automated Partner Report

The problem

We send monthly reports to partners but generating them is slow and labour-intensive. When insights are included they are often basic. For always-on brands we have largely stopped sending them... but partners are missing out on value they should be getting from us.

Your task

Build a templated, auto-generated partner report that pulls live data from BigQuery and produces a clean, insight-led summary per partner.

The goal here is for us to eventually have an internal reporting dashboard where we can jump in and run a report for one or multiple partners from one platform. In time, it would need to recognise the various types of commercial models we implement (blended commission on spend, commission on 'new' vs 'existing', cost per acquisition fee (£), fixed fee).

It needs to scale and ideally include, but not limited to the following data:

- Number of transactions

- Total spend
- Total revenue (based on commercial model type)
- Revenue from time boost period
- Number of transaction / spend / revenue for both 'new' and 'existing' members

This would then be in a format: PDF, email-ready HTML, or shareable link that we could send to partners. Long term - they will log into and have self-serve access (partner view only) to their data.

Brand : Gopuff

Commercials: 8% on spend (new), 1% on spend (repeat)

Start date for baseline: December 25
